

Native insoluble collagen fibres transfer intensive moisture to the skin and ensure a high level of tolerance.

Native soluble collagen molecules reinforce the skin's ability to bind moisture and support the smoothing of lines and wrinkles.

Collagen peptides that are identical to the skin penetrate deep into the skin and support cell metabolism and tissue renewal.

ActiveCell™

Instantly Activated Collagen + Stem Cell Eye Pads

Press the activating liquid into the pad chamber.

When the pads are completely moistened, peel off the foil and carefully remove the pads.

Apply the smooth side of the pad onto skin and leave to work for approx. 15 minutes.

Apple stem cells

>> ACTIVATE

Obtained from an ancient and very rare variety of Swiss apple, the Uttwiler Spätlauber. Almost forgotten until recently, science has now rediscovered its exceptional ability. Its extremely long-living cells have a high tannin content, and activate and extend the lifetime of the skin's stem cells. This means it works specifically against skin aging right down to the depths of its layers.

Resveratrol

>> REGULATE

A small glass of red wine in the evening is more than just a treat. Resveratrol, the highly effective antioxidant that is obtained from the skin of red grapes, can kill cancerous cells and help to prevent a heart attack. Research has also shown that it has excellent anti-aging properties for the skin. It neutralizes free radicals and regulates healthy cell growth, thereby extending the cells ability to function.

Baicalin

>> PROTECT

An active ingredient that is obtained from the baical skullcap. Native Americans already appreciated the healing properties of this plant. Baicalin offers perfect protection for the skin's cells. It acts to protect telomeres, and so extends the cell division stage in the skin's layers. This turns back the skin cells' "biological clock" and prevents premature skin aging resulting from early loss of activity in the cells.
