MAINTAIN AND PROLONG THE EFFECTS OF BOTOX® INJECTIONS WITH SAIAN NEUROPEPTIDE GROWTH FACTOR SERUM

Using the latest Biomimetic technology, SAIAN Neuropeptide Growth Factor Serum delivers 5 of the newest peptides into the skin, lifting, hydrating, reducing wrinkles, and prolonging the effects of Botox® injections. The peptides we use are inspired by nature, and identical to the growth factors found in human placenta.

With time, our natural peptides lose their effectiveness, which is why our skin starts to look older. To correct this, we have discovered that polypeptide chains can be boosted to produce more stable and effective molecules called biomimetic peptides. Biomimetic Peptides mimic the function of growth factors as messengers in the skin, allowing the epidermis and dermis to communicate more efficiently. When our intelligent Biomimetic Peptides are infiltrated into the skin, they naturally work on the different levels of the damaged skin and help it to regenerate itself without producing toxic side-effects. What's even more remarkable, our new incredible serum is able to prolong the effects of Botox® injections by months, allowing for less frequent visits to the doctor.

- increased collagen regeneration
- regained collagen fiber strength
- promoted hyaluronan synthesis
- boosted collagen production
- minimized appearance of wrinkles

	Human Placenta	Effect	BIO-Placenta
Growth Factors	EGF	Regeneration	EGF
	IGF-1	Anti-wrinkle	IGF-1
	Acidic FGF	Firming	Acidic FGF
	Basic FGF	Elasticity	Basic FGF
	VEGF	Nutrition	VEGF
Essential Factors	Vitamin	Cell Vitality	Vitamin: Vitamin B9
	Amino Acids	Reenergize	Amino Acids: Acetyl Glutamine
